

5TH REVISED EDITION

# Equivalencias Equivalent Values

Model Color, Panzer Aces, Model Air, Game Color

## INTRODUCCIÓN

Las gamas de Model Color, Panzer Aces, Model Air y Game Color han sido desarrollados tomando en cuenta los colores empleados más frecuentemente por el modelista. Las tonalidades que corresponden a Federal Standard, RAL y RLM usados en las maquetas y modelos más comunes han sido fielmente imitados en función de los originales oficiales o publicaciones especializadas.

Además, para la comodidad de nuestros clientes hemos recopilado en este folleto un listado de equivalencias de referencias con otras marcas. Las equivalencias a otras marcas son en algunos casos idénticos y en otros muy similares, sin embargo no podemos garantizar la equivalencia exacta al 100%.

En esta recopilación de equivalencias faltan muchos colores y muchas gamas, y estamos constantemente revisando y ampliando este listado para que sea lo más completo posible.

En esta nueva versión de Equivalencias, hemos tenido cuidado en revisar y corregir errores y omisiones. Algunos de nuestros otros impresos serán actualizados y corregidos de acuerdo, pero los folletos ahora en circulación puede que no estén del todo acordes a esta edición de Equivalencias.

Todos nuestros colores están conformes a la normativa ASTM D-4236 (American Society for Testing and Materials) y a la normativa Europea 67/548/ CEE. Las Hojas de Seguridad se pueden suministrar si es necesario.

## INTRODUCTION

Our color ranges in Model Color, Panzer Aces, Model Air and Game color have been very carefully chosen to provide the model painter with the references most frequently employed. The tonalities which correspond to the Federal Standard, RAL, and RLM references most common for models and miniatures have been carefully matched to the originals or specialized publications.

For the convenience of our customers, we have further collected in this leaflet some cross references with other model painting colours furnished us throughout these past years by experts in the field of model painting. We should add that these cross references are given to identical or very similar shades, but we cannot give a guarantee of 100% accuracy.

This collection of equivalencies many colors and many color ranges are not yet included, and our intention is to revise and enlarge this list periodically to make it as complete as possible.

In this new revised edition of Equivalencies, we have taken care to doublecheck and correct errors and omissions. Some of our other leaflets will be updated accordingly, but printed matter now in circulation may not be completely in conformance with this current edition.

All our colors conform to ASTM D-4236 standards and EEC regulation 67/548/CEE, and do not require health labelling. Safety Data sheets can be provided if required.
